

MIT Dowel Bar Scanner Services with **NABL** Test Report

As Per IRC 15-2017

Dowel Bar Scanner

Dowel Bar Scanner is non-destructive test to determine the quality of Concrete Pavement joints by using MIT SCAN 2BT Dowel Bar Scanner, measure the Length, Position and Direction of Bars in Concrete Pavement is using the Pulse induction measuring method. Multiple sensors and innovative data interpretation software make the device extremely accurate. Minimum 25% of Joints are required to be verified for quality assurance of the pavement and increasing Durability of pavement.

Why Choose Us

- Quality Services
- Testing as per standards
- Trainee Engineers
- NABL Certified Reports
- All testing under one roof
